PlateParrot

Your Smarter Grocery List

PlateParrot turns all your recipes into one shopping list, helping you shop faster and waste less.

What is PlateParrot?

PlateParrot is an app for **iOS** and **Android** that turns recipes into **one shopping list**.

Ingredients that several recipes need stand in **one line with the total amount**, and the list is sorted by store section. Recipes can be saved, organized and shared.

PLATFORMS

iOS and Android

LANGUAGES

English and German

PRICE

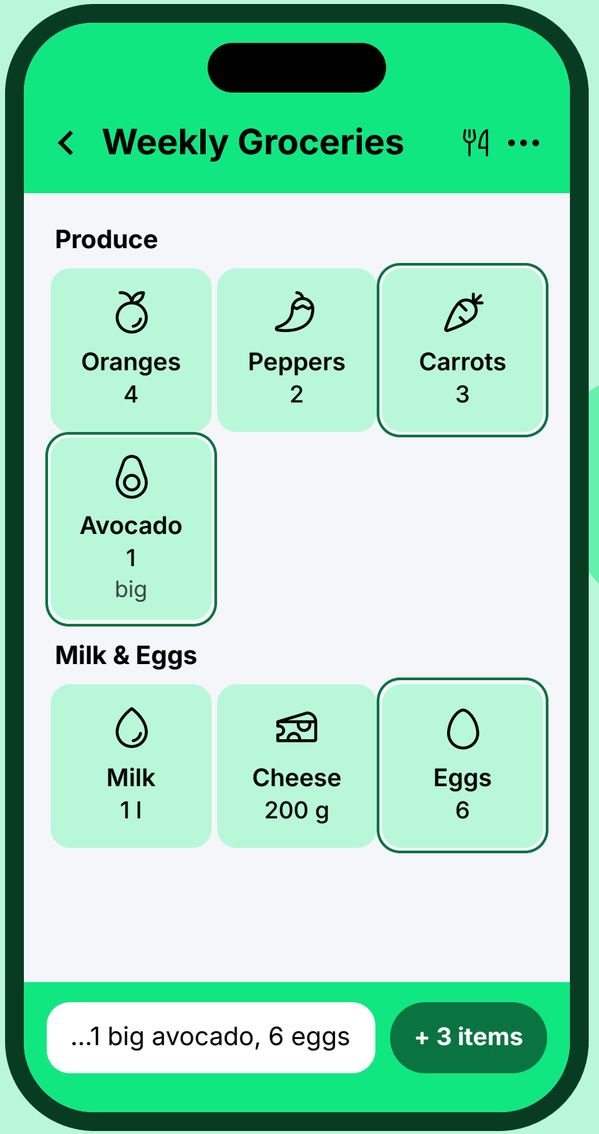

Free

Type it like you say it

Write **“3 carrots, 1 big avocado, 6 eggs”** in one line. PlateParrot splits amount, unit and item, and files each one in its aisle.

No forms, no fields: a full grocery list takes seconds.

3 carrots, 1 big avocado, 6 eggs

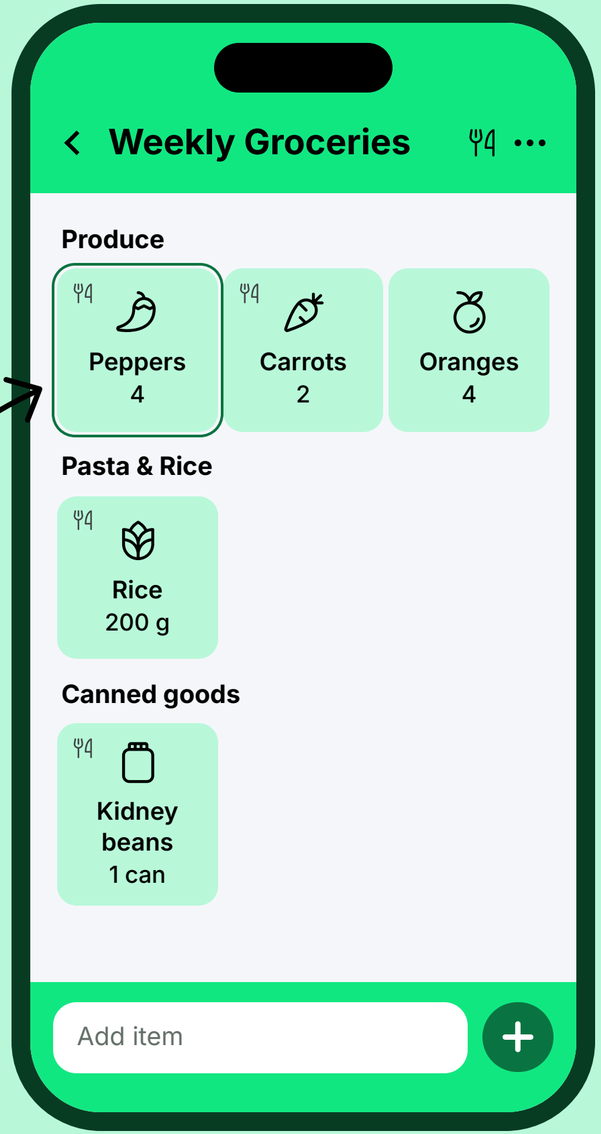

PlateParrot

Veggie curry − 2 +

Chili − 1 +

3 + 1 = 4

One grocery list from your recipes, adjustable any time.

Put whole recipes on the list. PlateParrot **adds up what they share**, follows the servings and converts the units.

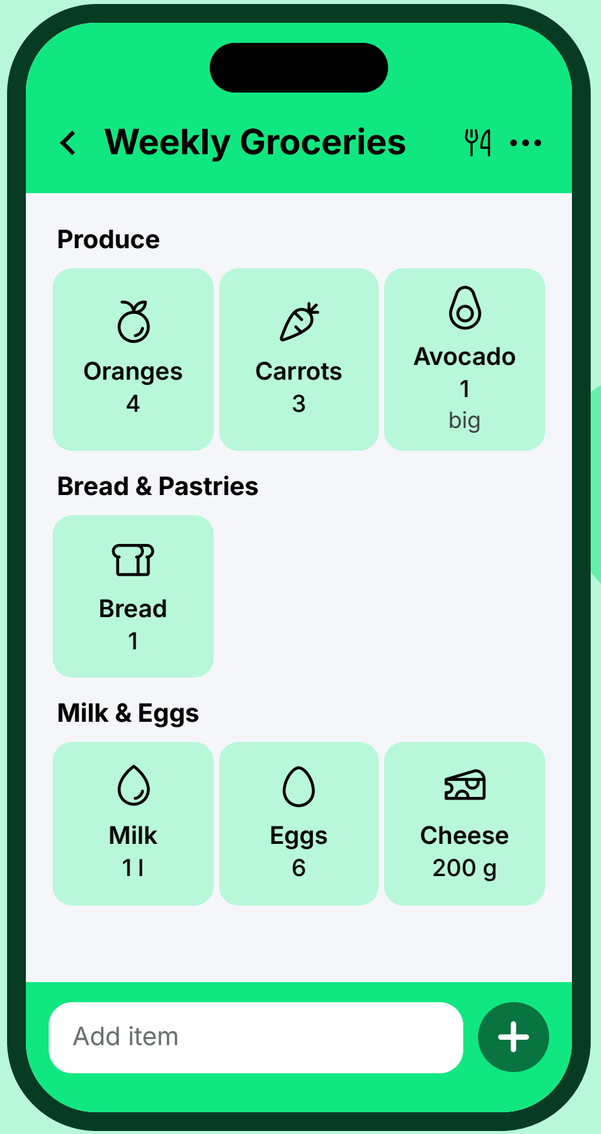

The curry needs three peppers, the chili one more: the list says **4 peppers**, in one line.

PlateParrot

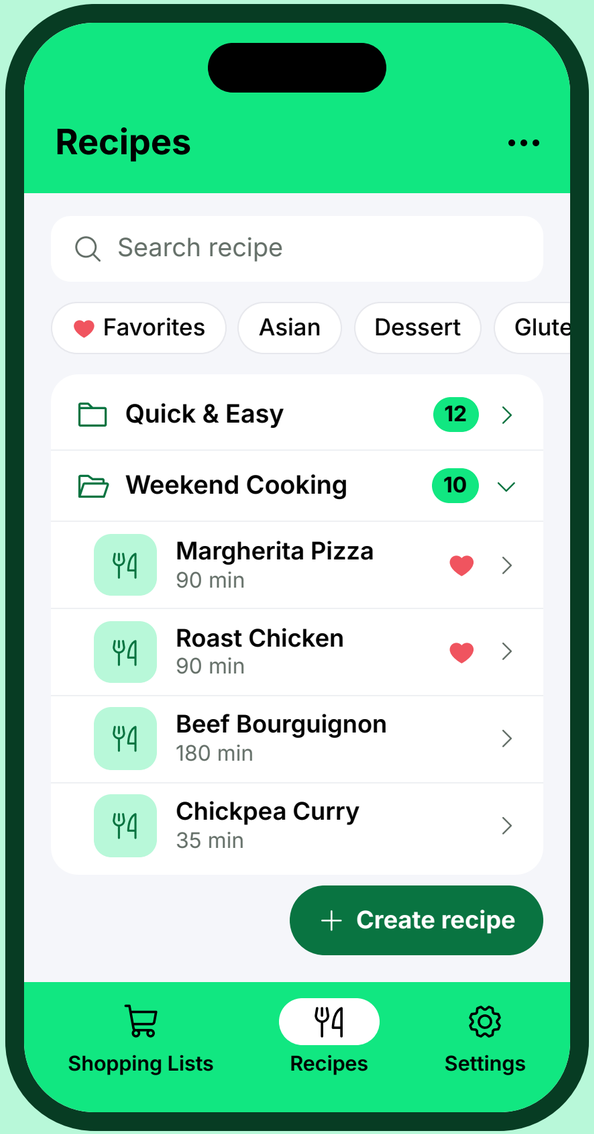

Shop the aisle, not the alphabet

Your list is grouped by **store section** instead of alphabetically, so you walk the aisles once instead of criss-crossing the store.

Rename, reorder and add sections until the list matches the supermarket you actually shop in.

PlateParrot

Your recipes, finally in one place

Keep every recipe in PlateParrot instead of screenshots and bookmarks.

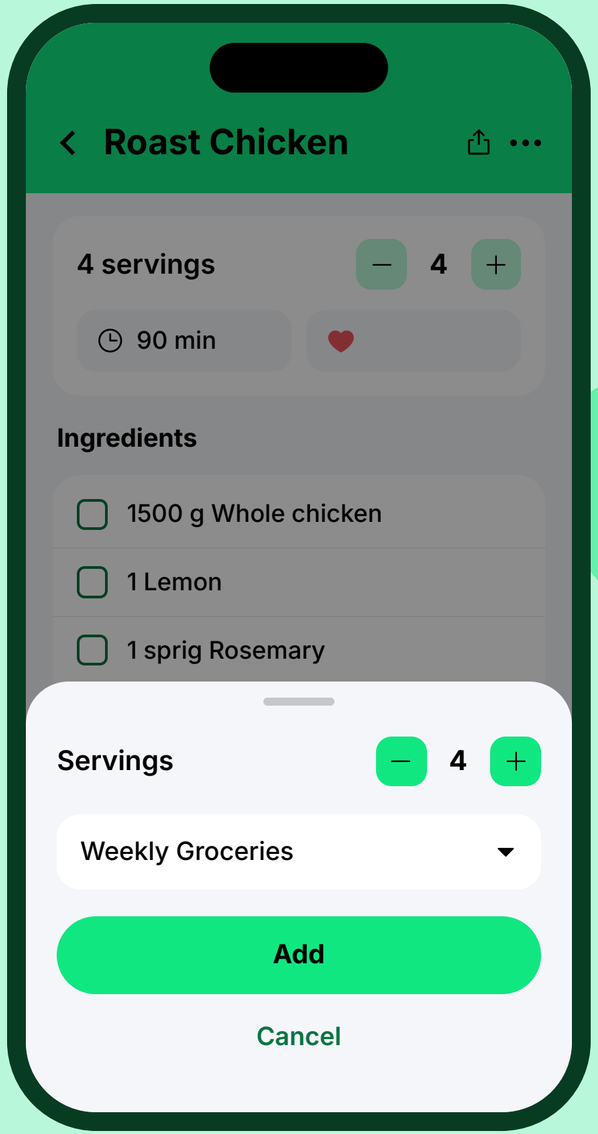

Sort them into **folders**, tag them as fast, vegetarian or cheap, and keep your **favorites** one tap away. **Search** finds a recipe by name, tag or ingredient.

PlateParrot

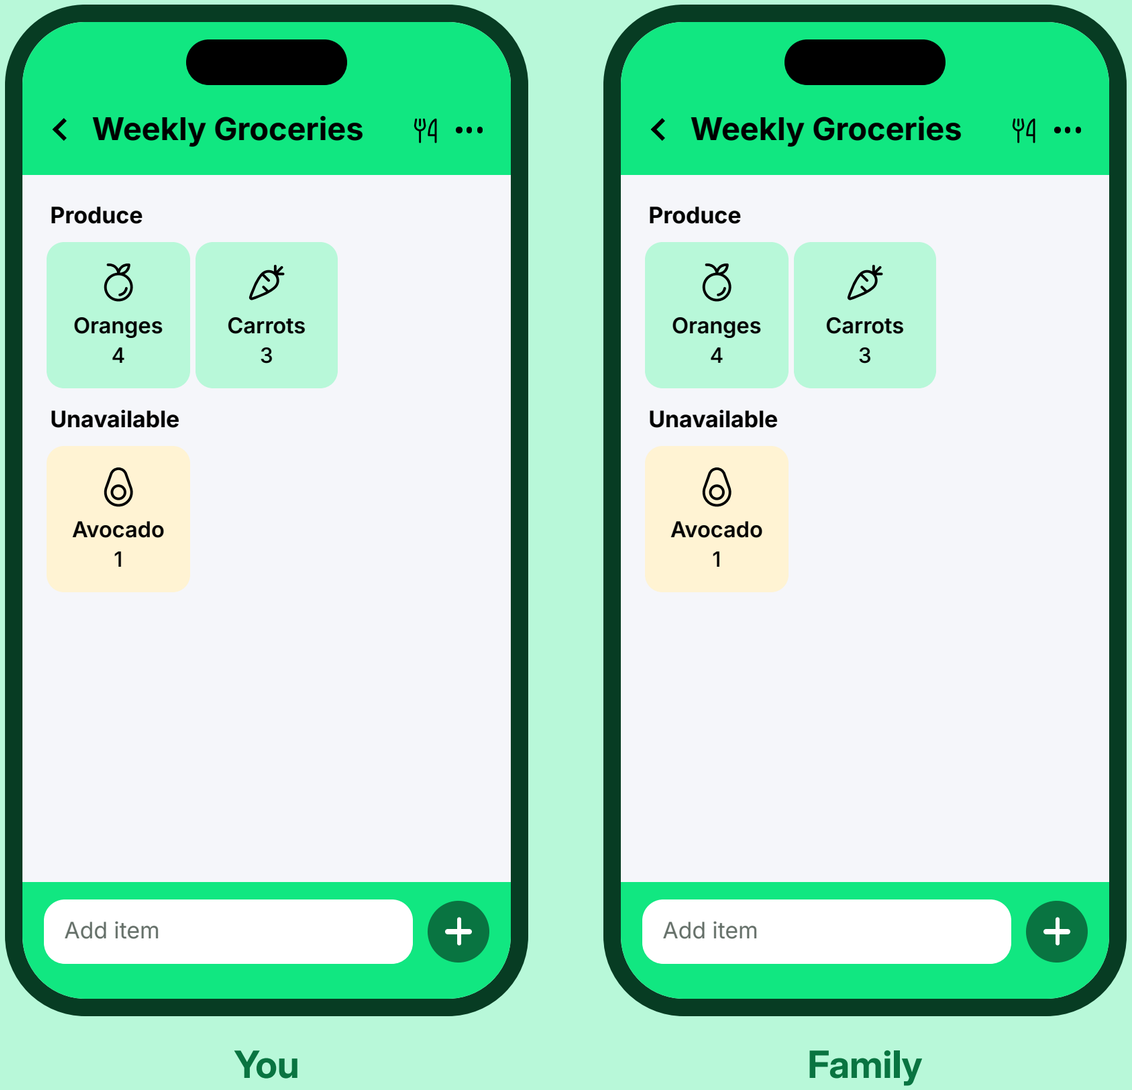

Pick the servings, the list does the math

Add a whole recipe to a list **in one tap** and choose the servings on the way.

Change a recipe from four servings to six later, and **every amount on the shopping list follows**.

PlateParrot

You Family

Shopping together has never been easier.

Share a list with family, flatmates, your club or colleagues, **up to 20 people**. Every phone updates at once, and whatever the shelf is missing stays on the list.

Recipes travel too: send one to anyone, **no login and no screenshot** needed.

PlateParrot

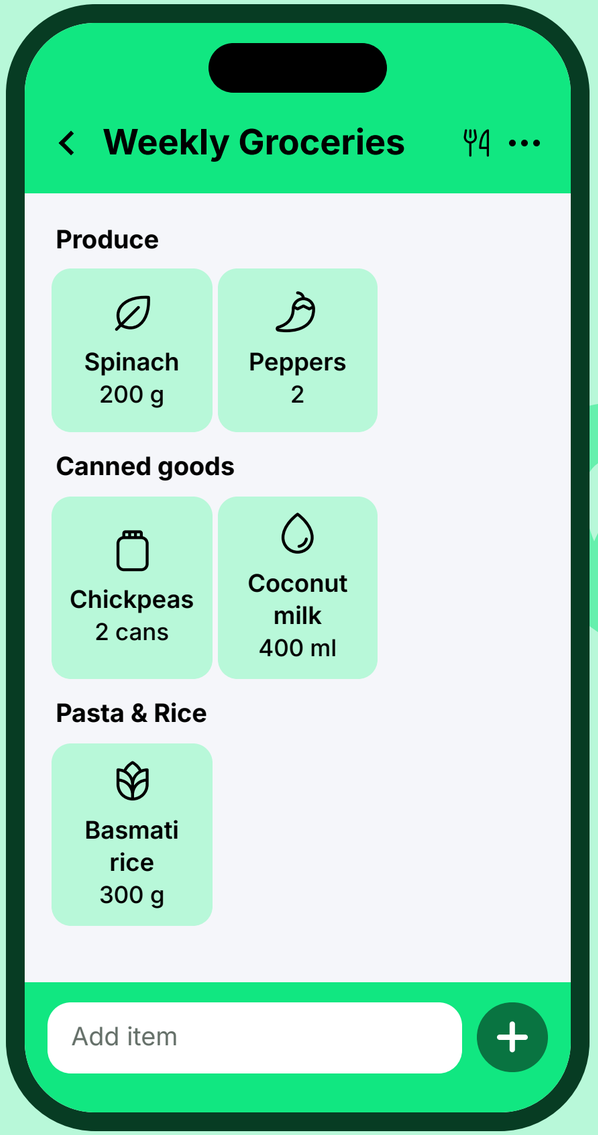

Create grocery lists with AI

Connect **Claude** or **ChatGPT**. It plans the meals and the ingredients land on your list.

Recipes and grocery lists come together **in seconds**.

Plan three dinners for this week and put the ingredients on my list.

Done. 14 items are on Weekly Groceries now.

PlateParrot

And much more, for kitchen and store.

Converts units

Cups, grams and ounces become one unit per ingredient.

Custom units

Bunch, can or slice: your own units still add up.

Multiple lists

Groceries, hardware store and the party run, kept apart.

Recurring lists

Build the camping list once, reset it after the trip.

Sold out?

Mark it, and it stays on the list for the next trip.

Your store

Store sections in the order of your supermarket.

Units on demand

Units you never use stay hidden until you type one.

Dark mode

Follows your phone, or stays on the one you pick.
